

Tip #37: Spacings and big operators

Sometimes sub/superscripts occupy so much space that summands and operators may get this far apart

$$\square \int_{B(0,1)} f(x) dx \qquad \square \int_{-\infty}^{+\infty} g(x) dx \quad (1)$$

$$\square \sum_{1 \leq i+j+k \leq N}^N (x_i + x_j)x_k \qquad \square \sum_{i=1}^{\phi(g(i))=N} i! \quad (2)$$

The mathtools package can rescue us...

preceding
formulae

No
manual
negative
space

$$\square \int_{B(0,1)} f(x) dx \qquad \square \int_{-\infty}^{+\infty} g(x) dx \quad (1.1)$$

but be careful of overlapping surrounding materials!

$$\square \sum_{1 \leq i+j+k \leq N}^N (x_i + x_j)x_k \qquad \square \sum_{i=1}^{\phi(g(i))=N} i! \quad (2.1)$$
